PROTOTYPING TESTING TOOL

The Prototyping Testing Tool ensures that the design and concepts of solutions are efficiently tested before resources are invested into creating the final solution.

WHY USE THIS TOOL?

The tool provides information on what part of the solution should be invested in further.

WHERE CAN YOU FIND THIS TOOL?

You can find more information on this and other tools from Development Impact & You Toolkit: An initiative of Nesta at diytoolkit.org

HOW TO USE IT

1. Write down the main idea/hypothesis that you want to test.

2. Using words, sketches or models, rapidly test your idea.

3. Examine your prototypes, refine and re-test to see where you can develop it further.

4. List the things that will take your idea from prototype to fully realized.

PROTOTYPING TESTING TOOL
Objective: To plan the process of prototyping
and testing the solutions.

STEP 4 - DESIGN THE PERCEIVED VALUE, PROTOTYPE AND TEST: EVALUATIVE

What is the Smart City solution you want to test?

Quickly try out your idea to determine whether it can work in real life.

Test your idea again after having developed it further, to examine details before launching it.

Make a list of all the things that you need to bring the idea to life.
